

## **Reconditioning and Rebuilding**

There are four aspects of making adjustments and repairs to a piano: Repairing, Regulating, Reconditioning and Rebuilding.

**Repairing** is taking care of whatever is broken, whether it's gluing parts back together or replacing the broken part with a new one.

**Regulating** is the process of adjusting the mechanical components of the piano to make them work correctly. (see the links on grand piano regulating and upright piano regulating.)

**Rebuilding** is the process of disassembling a used piano, and replacing all worn or deteriorated parts with new ones, and then reassembling and testing the instrument to the same tolerances as a new piano of like manufacture.

**Reconditioning** is the process of cleaning, repairing and adjusting a piano to maximum performance, using the original parts, replacing only those parts where specifically indicated.

Whether it's repairing, regulating, reconditioning or rebuilding, you can count on Bles Piano to do it right.
